

Test Sample	Target Classification	Active Sensors Exceeding Dotted Line ($V > 0.55\text{ V}$)	Initial Slope (dtdV)	Environmental Behavior (T/H)	Sensor Response Curve Characteristics	Primary Safe Proxy Used
Sample 1	AMBIENT_CLEANS	None (All lines remain inside 0.20 V - 0.55 V band)	Near Zero (approx 0)	Stable (25°C , $50\%\text{RH}$) inside dotted band	Flat, quiet noise floor across all 4 gas sensors.	Clean Indoor Air
Sample 2	WEATHER_NOISE	MQ-2, MQ-3, MQ-135 (All gradually drift above 0.55 V)	Slow & Smooth	Humidity Ramps from 50% to $90\%\text{RH}$ (exceeds 60% band)	Broad, slow upward drift mirroring the humidity curve.	High Humidity / Tea Steam Ramp

Sam ple 3	NOISE_SANIT IZER	MQ-3 ONLY (Shoot s vertical ly to \$2.50\te xt{ V}\$)	Extre mely High (\$\gg 0\$)	Stable (\$25^\circ\tex t{C}\$, \$50\%\text{R H}\$) inside dotted band	Single-sen sor isolation: Only \$V_{\text{MQ3}}\$ spikes; all other gas sensors remain flat.	Hand Sanitize r / Isoprop anol
Sam ple 4	EXPLOSIVE_ PROXY	SEN05 68 + MQ-13 5 (Both jump to \$\sim 2.00\te xt{ V}\$) + MQ-2 (\$\sim 0.80\te xt{ V}\$)	High	Stable (\$25^\circ\tex t{C}\$, \$50\%\text{R H}\$) inside dotted band	Nitrogen/S ulfur signature: SEN0568 and MQ-135 rise in high correlation.	Househ old Ammon ia Cleaner / Fertilize r
Sam ple 5	NARCOTIC_P ROXY	MQ-3 + MQ-13 5 (Both jump to \$\sim 2.00\te xt{ V}\$ - 2.40\te xt{ V}\$) + MQ-2 (\$\sim 0.90\te xt{ V}\$)	High	Stable (\$25^\circ\tex t{C}\$, \$50\%\text{R H}\$) inside dotted band	Solvent/Aci dic VOC signature: MQ-3 and MQ-135 rise together while SEN0568 stays low (\$0.25\text{V}\$).	White Vinegar (Acetic Acid) / Nail Polish Remov er
